# BACK TO THE GAME

Technine has always been more than a snowboard company. Its different and unique approach to snowboarding has changed forever the rules of this game. Thirty years has passed since when the founders introduced their revolutionary baseless binding at the ASR trade show, meanwhile snowboarding matured into a mainstream sport made of professional athletes, trainers, olympics and world streamed events. We're really hyped on all that, but after thirty one years in the business, we feel we must be the one to show the other side of that thing, made of fun, progression and wild childs upping the ante with style and passion.

# FOUNDATIONS

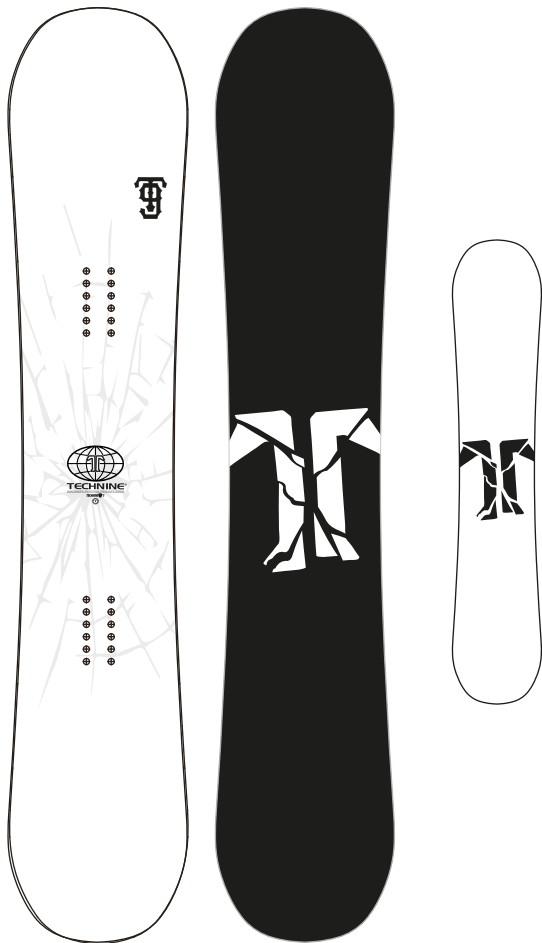

We put together a timeless collection of carry over pieces featuring key imagery of Technine heritage. Three boards and two bindings that will never gets old because they embody what Technine stands for since 1994.
